and associates

SPAY AND NEUTER FOR SEVERAL REASONS

The obvious benefit of spaying and neutering your pets is to prevent bringing pets into the world that will not have a home. But there are several advantages to your pet and yourself, also. A female dog or cat will live a longer life, and a male dog will not ever get testicular cancer. Your female will not go into heat, which means you won't have to listen to the ear-splitting wailing noise that cats in heat make to call male cats. And, your male animal won't go "roaming" to find a female. Your spayed or neutered animal will also be better behaved and less likely to urinate in places you'd rather he or she didn't.

When you have made the decision to have your cat or dog neutered, you'll be glad to know there is a facility close by that offers compassionate, friendly, quality care. Most of our clients are familiar with our clean and comfortable reception area and examination rooms. However, the rest of our clinic is what make us one of the best in the Hagerstown area. We offer up-to-date surgical facilities, with experienced surgeons, leading edge anesthetic techniques, and constant patient monitoring. Ask us for a tour of our very modern facility, where we carry a complete line of high quality pet foods, vitamins, flea & tick prevention products, and grooming products. Boarding & grooming are also available.

FACT: Spaying and neutering your pet will not make him or her fat.
